

EXECUTIVE BRIEF

ISO 27001

Information Security

90 h

Estimated timeline

7-9 months

CONTEXT

The rise in cyberattacks and data regulation has made ISO 27001 a common requirement to work with tech clients, public bodies and large accounts. It is the international reference standard for information security.

WHAT THE STANDARD REQUIRES

- An information security risk analysis
- A statement of applicability over Annex A controls
- Security policies and access management
- Business continuity and incident management
- Supplier and lifecycle security
- Internal audits and management review

IMPLEMENTATION PHASES

- | | | |
|---|---|------|
| 1 | Risk analysis
Asset inventory and risk assessment | 4 wk |
| 2 | ISMS design
Policies, controls and statement of applicability | 5 wk |
| 3 | Implementation
Deployment of technical and organizational controls | 8 wk |
| 4 | Internal audit
Verification and corrective actions | 3 wk |
| 5 | Certification
Support during the external audit (2 stages) | 3 wk |

Estimated timeline: 7-9 months

RETURN FOR YOUR ORGANIZATION

- ✓ A requirement for major contracts and tech clients
- ✓ Structured cyber-risk management and lower exposure
- ✓ Business continuity after incidents
- ✓ Alignment with GDPR and the National Security Framework

FREQUENTLY ASKED QUESTIONS

Is it the most demanding?

Yes, the most work-intensive due to the risk analysis and controls, but also the one with the greatest differential value.

Do I need a large technical team?

No, it scales to the organization's size; many controls are organizational, not just technical.

Does the external audit have stages?

Yes, it is carried out in two stages (documentary and implementation) before the certificate is issued.
